

ABSTRACT OF THE DISCLOSURE

Along weather strip includes an attach portion attachable
along a window frame for vehicle, and a lip portion for sealing
5 a glass window pane for vehicle. The lip portion protrudes from
the attach portion toward the glass window pane to be in contact
therewith. The glass window pane is movable within the window
frame. The lip portion includes a rough surface portion pressed
onto a face of the glass window pane and made of a molding material
10 containing the following (a) to (c): (a) olefin thermoplastic
elastomer in which a content ratio of polyolefin resin as a
hard segment is 50 mass% or more as a whole, (b) solid particles
having an average particle diameter in a range from 1 to 100 μ m,
and (c) liquid lubricant. The rough surface portion has a surface
15 formed in a corrugation state with a number of small projections
with the solid particles.
